DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6 are drawn to a method of forming solder bumps, classified in class 29, subclass various.
- II. Claims 7-17 are drawn to a apparatus for forming solder balls, classified in class228, subclass 41.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used adhesive bonding.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

During a telephone conversation with Gerald Linden on 1-27-05 a provisional election was made without traverse to prosecute the invention of group II, claims 7-17. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-6 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

DETAILED ACTION

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7-11 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Da Costa et al. (3,617,045). Da Costa et al. teach a chuck assembly, said chuck assembly comprising: a rigid, generally planar chuck base having a cavity extending into the chuck base from a top surface thereof (figure 4, item 50), a generally planar, flexible diaphragm extending across the cavity and secured to the chuck base (figure 4, item 62 and 58); said cavity being sized and shaped to receive the diaphragm (figure 4, item 58); an inlet tube extending from exterior the chuck base to within the cavity, underneath the diaphragm (figure 4, item 50); a permeable substrate disposed beneath the diaphragm, between the diaphragm and a bottom surface of the cavity (figure 4, item 58); the permeable substrate comprises such as a powdered metal plate (figure 4, item 58) the diaphragm comprises a sheet of silicon rubber material (figure 4, item 62) a central recess extending into the stage from a top surface thereof, said recess sized and shaped to receive a generally planar, flexible diaphragm, said diaphragm extending across the recess (figure 4 items 62 and 58).

Application/Control Number: 10/643,766

Art Unit: 1725

Allowable Subject Matter

Claim 12-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance: The prior art of record does not suggest or teach an apparatus for forming solder bumps, particularly the recess being sized and shaped to receive the manifold element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jonathan Johnson whose telephone number is 571-272-1177. The examiner can normally be reached on M-Th 7AM-5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Dunn can be reached on 571-272-1171. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
